

# Funiro - Home Inventory E-commerce Website

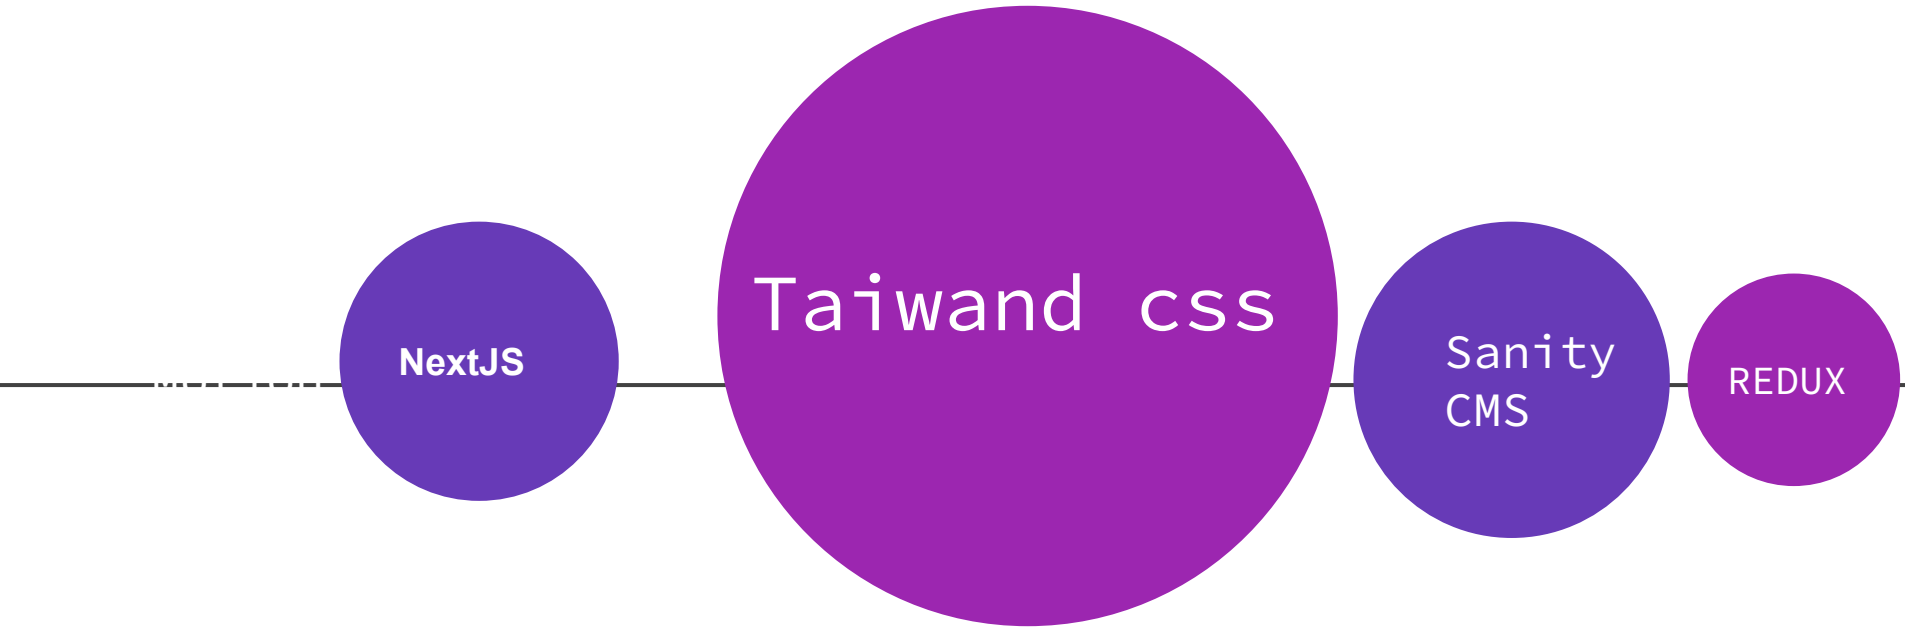

A seamless e-commerce experience for home decor, featuring sofas, tables, chairs, and other decor items.

# INTRODUCTION

---

Funiro is a home inventory e-commerce website I created using Next.js for the frontend, Sanity CMS for dynamic content management, TypeScript for robust development, and Tailwind CSS for styling. It features dynamic product pages, a user-friendly shopping cart, and a secure checkout process powered by Redux

# Project Setup

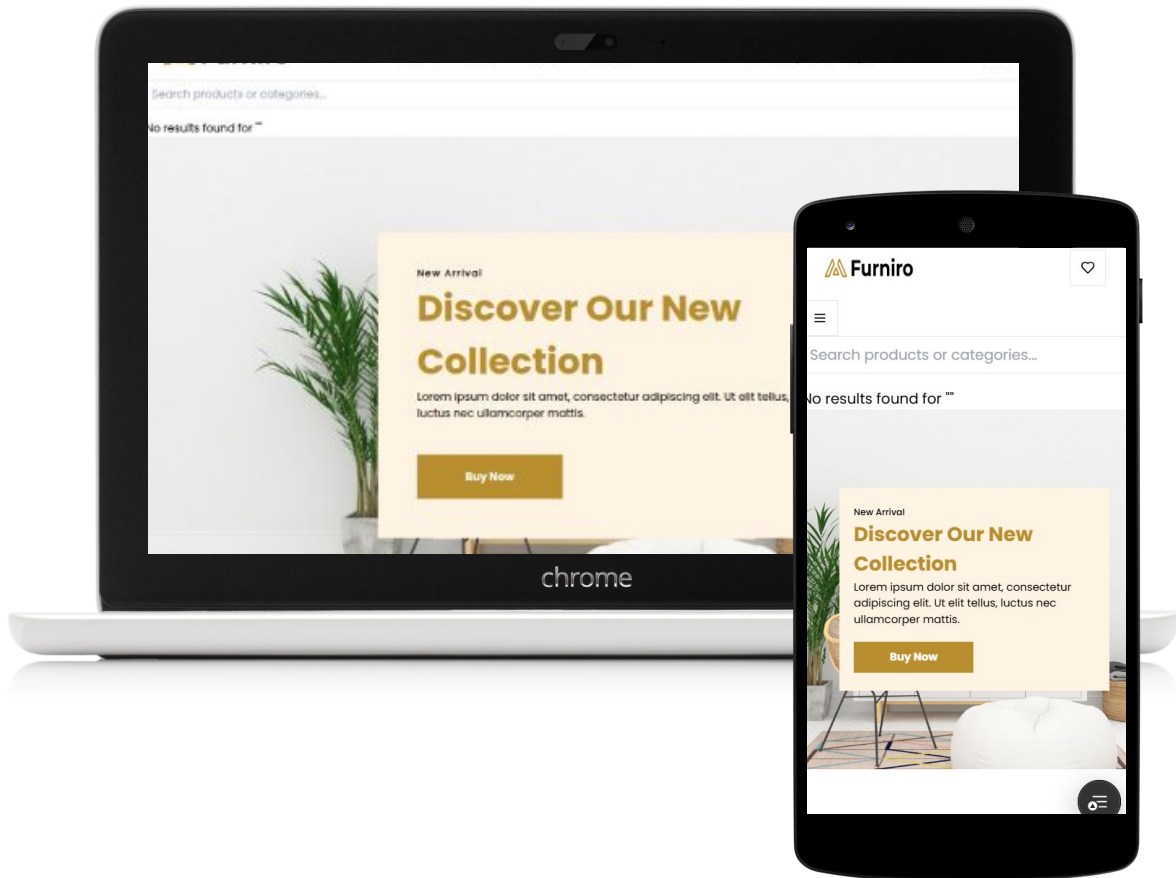

# Features Overview

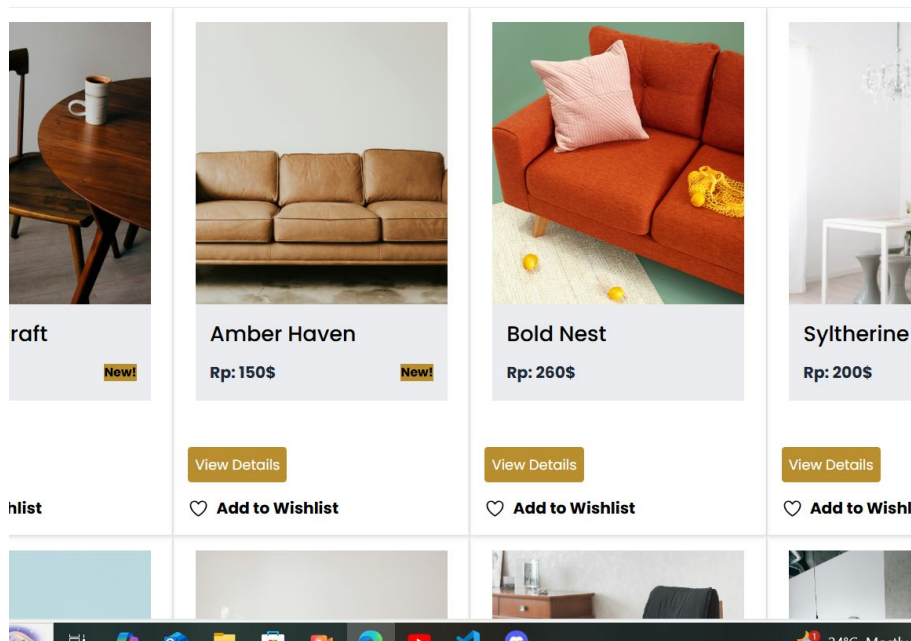

# Responsivness

— — —

For responsiveness, I used Tailwind CSS to implement flexible layouts and media queries, ensuring the website adapts smoothly to all screen sizes, including desktops, tablets, and mobile devices.

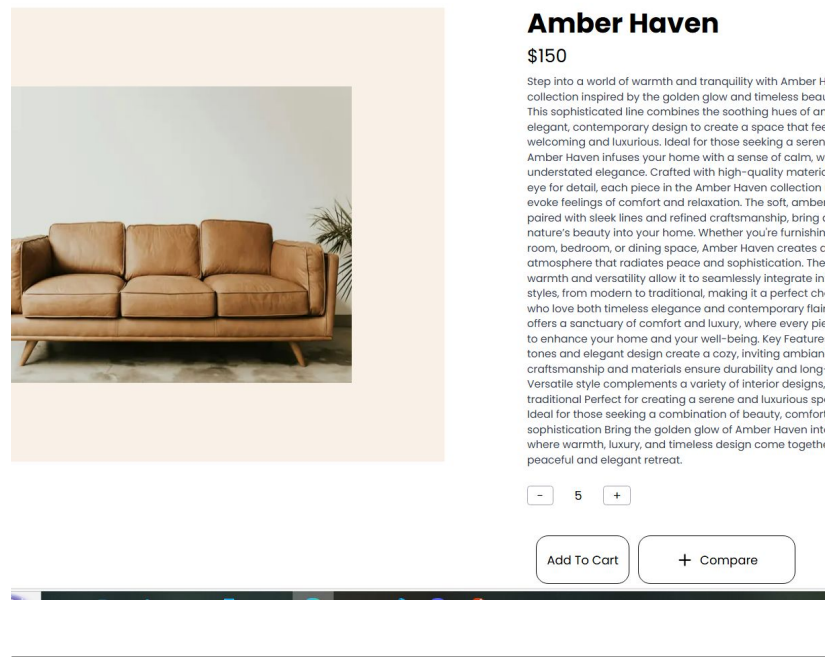

## Our Products

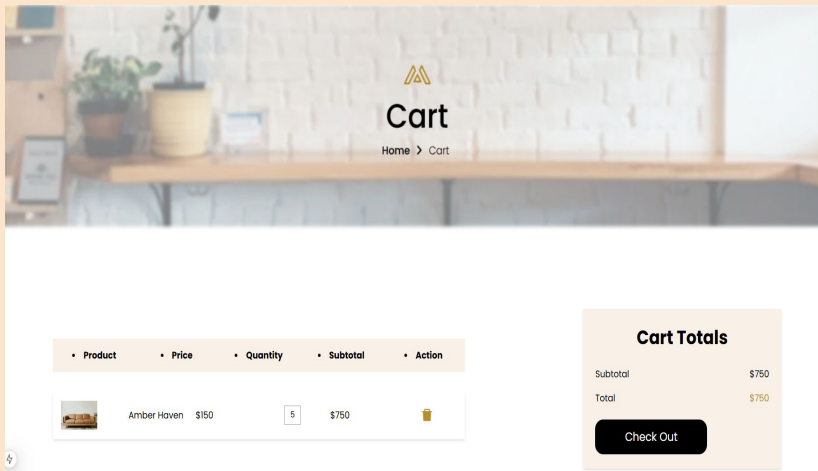

## Product Page

Dynamic product grid powered by Sanity CMS Categories include sofas, chairs, tables, and decor.

## Product Detail Page

Detailed product descriptions and "Add to Cart" button and increase quantity

# Cart Page

User-friendly cart interface with the help of Redux toolkit

## Using Redux for Cart Functionality

### 1. Setting Up Redux Store

Created a Redux store with a `cartSlice` to manage the cart state. The slice includes actions like adding, removing, and updating cart items.

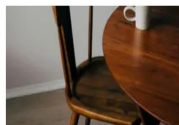

### 2. Managing Cart State

Used Redux actions to handle cart operations. For example, the **Add to Cart** button dispatches an action to add a product to the cart state.

### 3. Displaying Cart Data

Connected the cart component to the Redux store using the `useSelector` hook to display cart items dynamically and calculate totals in real-time.

## Displaying Pagination Controls

Created pagination controls that allow users to navigate between pages easily. These include buttons for "Previous," "Next," and specific page numbers, ensuring smooth navigation across product listing

## Functional Navbar

### Related Items

Created a section on the product detail page to display related products. Used a grid layout for responsive presentation of related items with images, titles, and links.

[Blog](#)

[Contact](#)

Created a **responsive navbar** with links to key sections of the website, such as Home, Product Categories, Cart, and Checkout. implemented a **hamburger menu** Integrated a **cart icon** that dynamically updates the number of items in the cart.

# Conclusion

Funiro is a fully functional and responsive e-commerce website that provides an intuitive shopping experience for home decor items. With features like dynamic product management, a user-friendly cart, secure checkout, wishlist, related items, pagination, and a functional navbar, it offers a seamless and engaging platform for users. By utilizing technologies such as Next.js, Sanity CMS, Redux, and Tailwind CSS, the project ensures efficient performance and a modern user interface. Funiro is designed to scale, with room for further feature enhancements and a robust backend for smooth content and order management.
